

New DPE Publication

Case Studies in Computer Ethics by editor Peter F. Meggison. Designed to serve as a resource for educators who wish to integrate computer ethics issues into their classes. Twenty-five case studies are provided for high school and college classes. The cases are appropriate for both specialized and general ethics courses in which computer and IT topics are discussed as well as courses such as computer applications where ethical concepts may be integrated into the instruction. In addition to cases involving general ethical situations encountered by computer and IT professionals, topics for consideration include privacy issues, computer crime, freedom of expression, intellectual property, human resource issues, software design and development, and social issues. Each case is categorized based on its topical area and is accompanied by a detailed solution—\$20 (2010).
